

## Overview

**DATA**CORP is focused on delivering consulting services to the Medium and Enterprise Business Market in Florida, including Education K-20.

We are engaged in **Network Systems Integration and Support Services**.

Our clients' engage us as "Trusted Advisors" to help them address needs and problems related to Network Computing, Security, Backup/Recovery, and Support. We integrate proven technologies to provide our clients with data high-availability and an optimized, secure network computing environment.

### Consulting Services

**Network Health Survey:** This exercise helps determine if an existing network infrastructure meets the minimum standards, typically set forth by management, to 'run' mission-critical business applications. Each network element (i.e., Server, Desktop, Security, Switches/Routers, Email/Messaging, Backup/Recovery), receives a grade on the state or general condition of the element. A Score Card' is prepared and reviewed with management. This report includes findings and recommendations to help improve cost-efficiencies, increase data availability, system performance and reliability. The report also helps management cost-justify an investment in an information-technology product and/or service.

**IPT Readiness Assessment:** This exercise involves the evaluation of a data network to help predict how well VoIP will work on a network prior to deployment. We simulate VoIP traffic and produce in-depth reports, including an executive summary "go/no go" report and reports to help pinpoint where network improvements are required to attain an acceptable Quality of Service (CoS).

### Systems Integration Services

- Network Migrations and Deployments: **Microsoft 2000/2003 Windows Server**
- Microsoft 'Thin-Client' Deployments: **Microsoft Terminal Services and Citrix**
- Microsoft Active Directory Services: Design and Deployment
- Microsoft Exchange High-Availability
- Microsoft Exchange Migrations: **Microsoft Exchange 2000/2003 Server**
- IP Telephony: **CISCO**
- LAN/WAN and "Wireless" Network Design and Support: **CISCO**
- Network Security: Intrusion Detection and Firewall Management
- Database Migrations and Performance Tuning: **Microsoft SQL 2000**
- Enterprise Data Storage (SAN/NAS) and Storage Management: **Hitachi and ADIC**
- Project Management and Project Management Office (PMO) Services

### Systems Support and Maintenance Programs

We offer two (2) options for Network and PC Technical Support/Maintenance:

**Reactive or Per Incident** Support through a pre-paid 'block of time'. Clients can purchase as little as 30 hours to gain access to DATACORP's staff of senior network engineers with a 4-hour response time in support of their existing network infrastructure.

**Proactive** Support whereby a client pays a flat monthly fee to have their network and computer systems maintained by DATACORP.

## Our People

Our team is comprised of senior technical professionals and certified engineers, experienced with large-scale, distributed network systems design and integration experience. They work in collaboration with our clients' internal IT staff to solve real business problems.

## Key Differentiators

Our business model is founded on the complex needs of business continuance in an era of ever shrinking IT budgets. We address the need for a technical consulting firm with best practices and pure intellectual capital to provide business entities with alternatives.

We do not always take the traditional consulting route of 'fork lifting' legacy systems for new, emerging technologies. On the contrary, we make every effort to design solutions that leverage investments in proven systems. Our mission is to help clients strive towards 'zero' downtime within a reasonable budget and acceptable ROI.

## Strategic Alliances

We have established strategic alliances with companies and technology innovators that increase our value-proposition to the select clients we serve. These alliances include Microsoft, Citrix, Hitachi Data Systems, Cisco, ADIC, NETIQ, AVNET Enterprise Solutions, and New Horizons Learning Centers.

We will continue to identify superior alliances to maximize the value of our solutions and to help keep our team abreast of better and more cost-effective alternatives to client business problems.

## Founding Philosophy

DATA CORP's founding philosophy is based on Trust, Commitment, and Service Excellence.
