

Data Backups are a Concern for Everyone

So Invest in

BACKUP ASSISTSM

Key Benefits

- ✓ Cost-Effective, Secure Reliable
- ✓ Fast Backups/Restores
- ✓ Disaster Recovery
- ✓ Business Continuity
- ✓ Efficient Data Replication
- ✓ Low Impact on Network
- ✓ Easy Data Management
- ✓ Regulatory Compliance
- ✓ Broad Platform Support

Appliance Specifications

Workstation Appliance
Investment - \$1,895

Server Appliance
Investment - \$5,200 - \$6,400

Data Center Storage Cost

Investment - \$1.25 per GB
• 30 Day Retention (100GB Min.)

Investment - \$1.75 per GB
• Custom Retention (100GB Min.)

Obtain the best of both worlds: Local and offsite backups and restores

We install a pre-configured storage appliance as a local vault in your offices. An option on the, pre-configured storage appliance automatically replicates your local backups to our data center. This option gives you more **cost-effective** and **faster backups** and restores plus offsite **disaster recovery**—without the need to manage hardware or upgrade bandwidth. You can purchase multiple pre-configured storage appliances to protect multiple remote/branch offices (ROBOs) and consolidate all their backups to a centralized data center.

High-Speed Backups and Restores

With the pre-configured storage appliance, backups are sent at LAN speed to the onsite vault. It then replicates backups to our data center, providing faster data protection. Local restores can be performed from the appliance at LAN speed, providing the fastest possible restore rate and improving Recovery Time Objectives (RTO). This makes the pre-configured storage appliance ideal for your sites with large data sets.

Automatic Replication

The pre-configured storage appliance automatically replicates data from your onsite vault to our data center. If there is a site outage that also affects your onsite vault, you have a copy of the data at our data center, giving you the peace of mind that your data is accessible whenever you need it.

Encryption

The pre-configured storage appliance is **secure**, providing no back-doors to your data. You can encrypt data during a backup job and it remains encrypted on the onsite vault and the vault located at our data center. An extra layer of protection is wrapped around your data during transport, with **256-bit encryption**.

Delta Processing and Bandwidth Throttling

The pre-configured storage appliance leverages i365's efficient de-duplication technology. It uses the EVault DeltaPro™ technology, sending only new or changed blocks of data within files from your onsite vault to your offsite vault, achieving fast and efficient replication. Bandwidth throttling minimizes network traffic devoted to backups, so you **don't disrupt day-to-day** business operations during replication.

Plug and Play

Setting up a pre-configured storage appliance is **easy**. We simply turn on the appliance, connect it to the LAN/internet connection, and contact the data center to verify the connection to the offsite vault. The appliance is managed by certified vault administrators, allowing you to **concentrate on your business** instead of backups.
